“TOP 3” I.T. CHECKLIST

2017/07/10

BACKUPS

*A robust backup strategy should be your I.T. priority #1. If someone deletes a file(s), your hard disk crashes or you get infected with destructive malware, backups are crucial for recovery. The most valuable part of *any* computer is the data you store on it. Please ensure you have a solid backup strategy.*

SECURITY

Recent “Ransomware” attacks have proven once again that computer security is important for everyone. Make sure you have up-to-date antivirus protection, a robust Internet firewall, strong Wi-Fi security and that you update your operating systems and all applications regularly with security patches.

MAINTENANCE

A good preventive maintenance schedule will keep your systems (and your sanity) in top shape. This is arguably the most overlooked part of business I.T. that, when done properly, keeps most common issues at bay.
